Vox-out-of-a-Box[®] by AviaVox

digital airport announcement system

How many times did you think: "we need to find a way to automate our multilingual announcements and related voice base maintenance", or "the quality of our current announcements has to meet the high demanding standards of today". "But can this be done against acceptable costs?"

These arguments are very commonly heard for the airports in the range up to 2 million passengers per year. Therefore, a whole new product has been developed to match your airports' requirements.
